## ACKNOWLEDGEMENTS

Completion of this dissertation was possible with the support of several people. I would like to express my sincere gratitude to all of them.

First and foremost, I would like to thank to my supervisor Prof. Dr. Talat YALÇIN for his continuous guidance, understanding and encouragement throughout the course of this thesis. I always consider myself very lucky to have such a good mentor by whom I am inspired and motivated in the scientific field with his academic success and life experiences. I am extremely grateful to him for giving me the chance of working together.

I would also like to thank to my committee members Assoc. Prof. Dr. Ahmet KOÇ and Assist. Prof. Dr. Gülşah ŞANLI-MOHAMED, for their suggestions and contributions.

I am also thankful to members of Molecular Genetic Laboratory in the Molecular Biology and Genetics department for their helps and kindness.

My special thanks go to my dear friends and co-workers Melda Z. GÜRAY, Ahmet E. ATİK, Çağdaş TAŞOĞLU and Dr. Filiz YEŞİLIRMAK for their sincere, helps, friendships and moral supports. It has been a pleasure working with you.

Last but not least, I would like to send my deep appreciation to my family. I owe a lot to my parents and my sister, who encouraged and supported me at every stage of my personal and academic life, and longed to see this achievement come true.

Finally, I wish to acknowledge the TUBITAK funding (Project No. 109T430) which was granted during my graduate education.
